

Fenderfits®

The smart way to protect your boat

As recommended by marine chandleries, trimmers, repairers and dealers of all modern yachts and motor-boats across the globe. This product is the #1 brand of fender cover in the world.

Why Use Fenderfits?

Imagine you just bought yourself a brand new \$3000 golf club. The last thing you want is the driver getting damaged whilst carrying it in your golf bag, so you spend \$60 on a quality head cover.

Now imagine that you own a beautiful, fibreglass boat which is your life and treasure, and cost a lot more than your recently purchased golf club. The amount of damage a fender causes your boat is a lot more than what your new driver would suffer in your golf bag. For \$50 (based on a pair F2 size covers), you can cover up your fenders and never have to worry about fender damage again.

You will be able to have a good night sleep without the sound of that irritating fender squeak keeping you awake.

Added to that, the smart appearance of the covers will add a whole new dimension to your boat's presentation.

So go on....**Be Smart!**

Single Fenderfits to suit Marker Buoys

Part No.		Per Pack	Max Width	Max Length	Suits
37000(Colour)	A1	Single*	29cm	37cm	37554

* Double Thickness

3 Colours Available Ex-Stock. Black, Claret & Navy (Add first letter of colour onto end of SAW Code) Other colours available to firm orders only.

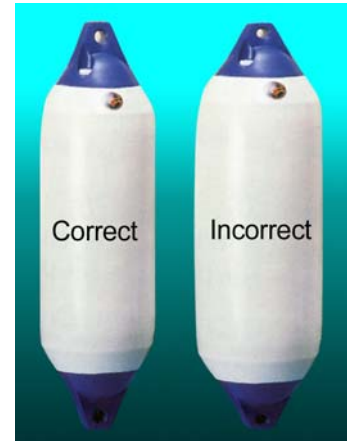

FENDER INFLATION GUIDE

This inflation guide will help you to find the correct circumference measurement when inflated to its most efficient size. Finding the right size cover & how to avoid over-Inflation

A common mistake that can lead to incorrect measurement of fender cover sizes, and in fact a shorter life-span for fenders, is over inflation. Fenders need to be inflated correctly so that they may act like a cushion and absorb impact, rather than try to resist directly against it. This way your fenders last longer and prevent damage to your top sides....

NB: When the fenderfits are measured, it is done so by using the actual fender statistics of length x diameter.

An over inflated F Series fender has bowed-out sides and a rounded top as shown above.

NB: When the fenderfits are measured, it is done so by using the actual fender statistics of length x diameter.

Part No.	Fenderfit Width	Fenderfit Length	US Polyform	Plastimo cm	Majoni dia x length	Taylor inch	Castro	Dan mm
